*Phoenix patented Ambience Low Voltage
or LED Pergola Add On Kit*

Arbor with Scalloped Courtyard Fence

Pergola with Lexington Fence

How does the cost of vinyl fencing compare with traditional wood fences?

The initial cost of vinyl (PVC) when compared to wood is slightly higher for the material costs in most regions of the country. However, when all of the varied costs are taken into account over the life of your fence, vinyl (PVC) becomes the true money saver. Factors such as having to replace the wood fence in 5-15 years, yearly maintenance costs (labor, paint, replacement

boards, etc), and the effects on the environment because of arsenic in treated wood or the toxic chemicals needed to maintain a wood fence show that wood truly isn't as cost effective in the end. Once your **PHOENIX** vinyl (PVC) fence is installed, you do not have to worry about painting, nails rusting, boards rotting, or splinters.
